

# CrossCheck

## CrossCheck by Namatad

### Controlled Work Visibility

*See the risk.  
Alert the worker.  
Record the event.*

Real-time visibility for hazardous energy control, exposure awareness, and controlled work.

Product Brochure

## How CrossCheck Works

*A real-time visibility layer around controlled work.*

- **1 Define what is controlled**

Tag equipment, mark zones, and establish the hazard state before work begins.
- **2 Apply lockout or tagout**

Tie the control state to the asset so everyone sees what is active right now.
- **3 Track who is nearby**

Use wearables or phones to see who is close and when exposure starts or ends.
- **4 Notify on proximity or entry**

Surface geofenced hits, local warnings, and escalations when someone enters controlled space.
- **5 Preserve the event trail**

Record who initiated the control state, how long it stayed active, and what happened next.
- **6 Review and act confidently**

Use the record for reporting, briefing, and continuous improvement.

### The Digital Twin You Can Trust

CrossCheck layers a live remote view on top of locks, tags, and equipment already in place.

#### See what is active

Know which assets are controlled and the current hazard state.

#### See where it is active

Live view of zones and equipment under control.

#### See who is nearby

Real-time awareness of people near controlled assets and zones.

Without being physically on the floor.

CrossCheck delivers real-time visibility for safer, smarter, and more accountable controlled work.

## What CrossCheck Covers

Visibility, alerts, accountability, and review in one operational view.

### Hazardous energy control

Visualize lockout/tagout points and verify control status in real time.

### Geofenced alerts

Get notified when someone enters or exits a controlled zone.

### Worker accountability

Know who is in the zone, their role, and their status.

### Live hazard visibility

See current conditions and control status at a glance.

### Location accountability & workspace visibility

Understand who is where and which areas are active.

### Controlled assets

Locked-out, tagged-out, and restricted equipment stay visible in context.

### Proximity alerts

Surface the moments that matter when people enter controlled space.

### Event record

Keep a timeline for review, briefing, and post-job reporting.

### Communicate to safety leaders

Show supervisors a live view of zones, nearby personnel, and safety-critical events.

### Exposure monitoring

CrossCheck can pair with CANAIRY to add real-time exposure monitoring to controlled work.

### Implementation in 5 Simple Steps

Order a starter kit

Set up the account and floor plans

Deploy with your CrossCheck equipment

Start using it on the floor

Review analytics and reporting

### Why teams choose CrossCheck

- ✓ Works with existing lockout/tagout workflows.
- ✓ Adds a digital twin layer for remote visibility.
- ✓ Combines field devices, wearables, phone alerts, geofencing, and reporting.
- ✓ Supports phased rollout that scales with your operation.
